Objective:

Chemical Science has made inroads in understanding climate change and its causes, and is beginning to help develop a strong understanding of current and potential impacts that will affect people today and in coming decades. Human activities that adversely affect ecosystem resilience such as reduction of biodiversity, exploitation of natural resources, pollution, land-use, and anthropogenic climate change are increasingly causing regime shifts in ecosystems, often to less desirable and degraded conditions. Incremental reductions in greenhouse gas emissions and climate vulnerabilities are important steps. An integrated approach will enable low-emission and climate-resilient sustainable development with contributions from multiple sectors, stakeholders, and ecosystem. Two-day conference will bring together interested parties from scientific, regulatory, community, and commercial entities to share knowledge and their contributions for world to make better place to live.

Scope:

The scope of the conference is as follows

Concept of Green (LECRDS): Low Emission Climatic Resilient Development strategy

Green Chemistry: Applications, Scope, Trends

Environmental Issues: Impact & assessment

Analytical Techniques: Applications & Abatement

Exposure studies: Health Hazards & Safety

Other relevant issues pertaining to the theme
